

Practical – 2

Object: WAP to demonstrate type casting.

Program:

Typecasting.java

```
class Typecasting
{
    public static void main(String []args)
    {
        long l=1000L;
        int i=(int)l;
        short s=(short)i;
        byte b=(byte)s;
        System.out.println("Number in long format= "+l);
        System.out.println("After typecasting into int format= "+i);
        System.out.println("After typecasting into short format= "+s);
        System.out.println("After typecasting into byte format= "+b);
    }
}
```
